## Message from the IPCCC 2023 Technical Program Chairs

Welcome to the 42nd IEEE International Performance Computing and Communications Conference (IPCCC 2023)! This year, we are glad to host the conference, with most sessions in-person, in Anaheim, California, USA, whereas some sessions will be remote due to on-going travel restrictions.

IPCCC 2023 received 127 paper submissions (99 full, 21 short, 7 poster papers). Out of these submissions, 33 papers were accepted as full papers (acceptance ratio of 26%). Each paper was thoroughly reviewed by at least three reviewers. In addition, 22 papers were accepted as short papers and four as poster papers. Full papers, short papers, and poster papers are all included in the IPCCC conference proceedings.

We would like to express our sincere gratitude to all who have contributed to the IPCCC 2023 program. First, we thank the authors of all paper submissions, regardless of the papers’ acceptance status, for their efforts and submitting their quality research work to IPCCC. Second, we are grateful for the support of 104 Technical Program Committee (TPC) members for their fair, timely, and constructive reviews. The work of the authors and the TPC members contribute to the quality of the conference. Third, we thank the IPCCC 2023 Organizing Committee and Steering Committee for their support. Finally, we would like to welcome all attendees to the conference and we greatly appreciate your participation. We are sure that you will find the IPCCC 2023 program interesting, and we hope you will enjoy the experiences provided by the conference.

■ Ruozhou Yu and Song Fu, IPCCC 2023 Technical Program Chairs

THE INTERNATIONAL PERFORMANCE, COMPUTING AND COMMUNICATIONS CONFERENCE IS THE PREMIER IEEE CONFERENCE PRESENTING RESEARCH IN THE PERFORMANCE OF COMPUTER AND COMMUNICATIONS SYSTEMS. FOR FOUR DECADES IPCCC HAS BEEN A RESEARCH FORUM FOR ACADEMIC, INDUSTRIAL AND GOVERNMENT RESEARCHERS.

# IPCCC 2023: KEYNOTE SPEAKER

## Distributed AI in the New World of Device-Edge-Cloud Computing

### Professor Ling Liu

School of Computer Science - Georgia Institute of Technology

Friday, November 17<sup>TH</sup> ■ 13:15-14:30 PST ■ Room: Garden A

#### ABSTRACT

The rapid growth of wireless mobile broadband communication networks has fueled new capabilities in scalable device-to-edge-to-cloud continuum, ranging from increased data rates of 1~10 Gbps, ultra-low latencies of 1ms or less, larger coverage with massive number of devices connected 24x7. These advances have enabled exciting new edge native applications, such as Augmented Reality/Virtual Reality (AR/VR), video analytics, and 3D on-device intelligence. However, unlike Clouds, edge clients have little elasticity in computing and communication resources. Edge devices are intermittently connected to the Internet, inherently heterogeneous in computing resource, and more exposed to privacy and security violations.

In this keynote, I will use on-device intelligence and distributed AI as two emerging and complimentary distributed learning paradigms in navigating this device-edge-cloud continuum, while considering resilience, privacy, and multi-tenancy of shared and heterogeneous resources. I will describe alternative distributed learning architectures and optimization strategies, enabling edge system adaptability and robustness, while preserving good application fidelity (level of accuracy).
